

Based on your ORYVA-AI specification, I wouldn't ask Claude to "build a website." I'd ask it to build a **premium, production-grade SaaS landing experience** that feels like companies such as Stripe, Vercel, Linear, OpenAI, Anthropic, and Apple had collaborated on it.

Your document already defines the content, pages, and functionality.

 897faf52-4569-4190-9bae-0cf973b...

The prompt below is focused entirely on **design, UX, animations, architecture, and execution quality**, while respecting your specification.

 897faf52-4569-4190-9bae-0cf973b...

MASTER PROMPT — ORYVA-AI WEBSITE

You are a senior product designer, senior frontend architect, creative director, motion designer, UX researcher, and staff-level Next.js engineer.

You are not creating a generic company website.

You are building the digital identity of ORYVA-AI.

The goal is to create a website that immediately communicates innovation, engineering excellence, technical credibility, and premium craftsmanship.

This website should feel like the visitor has entered the future—not another startup landing page.

The design should leave people saying:

"This company clearly knows what they're doing."

Every section should have purpose.

Every animation should reinforce the brand.

Nothing should exist only for decoration.

Overall Vision

Design something between

- Apple
- Stripe
- Vercel

- Anthropic
- OpenAI
- Linear
- Framer
- Arc Browser

The experience should be

- futuristic
- minimal
- premium
- cinematic
- engineering focused
- elegant
- calm
- confident

Avoid

- startup clichés
- loud gradients
- excessive neon
- gaming aesthetics
- cyberpunk overload
- template-looking layouts
- Bootstrap style cards
- generic hero sections

The entire site should feel handcrafted.

Visual Personality

The website should feel like

"A company quietly building the future."

Not

"A company trying to convince people it builds the future."

Confidence should come through simplicity.

Design Language

Large breathing spaces

Excellent typography

Soft shadows

Floating elements

Glassmorphism only where useful

Beautiful spacing

Perfect alignment

Strong hierarchy

Rounded corners

High-end transitions

Subtle gradients

Micro interactions

Layered depth

Parallax where appropriate

Soft blur

Smooth scrolling

Section reveals

Elegant hover effects

Beautiful cursor interactions

Animated grids

Tiny motion everywhere

Nothing should ever feel static.

Color Palette

Mostly dark.

Near black backgrounds.

Deep charcoal.

Very subtle blue highlights.

Muted whites.

Soft greys.

Tiny accents of electric blue.

Avoid rainbow gradients.

Avoid bright purple.

Avoid bright pink.

No glowing neon everywhere.

The colors should communicate engineering.

Typography

Huge typography.

Bold headlines.

Clean sans-serif fonts.

Suggested fonts:

Geist

Inter

Satoshi

General Sans

Space Grotesk

IBM Plex Sans

Use excellent typography hierarchy.

Every headline should feel premium.

Motion Philosophy

Motion should be intentional.

Not flashy.

Examples

Background grid slowly moving

Particles reacting to cursor

Cards lifting gently

Buttons breathing

Text fading upward

Image parallax

Mouse-follow lighting

Smooth section transitions

Magnetic buttons

Floating UI

Morphing gradients

Everything should run at 60fps.

Hero Section

The hero must immediately create a "wow" moment.

Full viewport.

Beautiful animated background.

Not a stock image.

Possibilities:

AI neural network

Animated grid

Flowing particles

Mesh gradients

Moving lines

Abstract intelligence visualization

Depth.

Motion.

Soft lighting.

Center aligned.

Large typography.

Powerful headline.

Beautiful CTA buttons.

Secondary CTA.

Scroll indicator.

Floating UI previews.

Tiny motion throughout.

Sections

Each section should feel unique.

Never repeat layouts.

Alternate visual rhythm.

Large visual changes between sections.

Every section should tell part of the story.

Do not stack identical cards repeatedly.

Components

Every component should be custom designed.

Examples

Feature cards

Timeline

Stats

Testimonials

Buttons

Forms

Navbar

Footer

Tabs

Accordions

Everything should feel premium.

Navbar

Transparent initially.

Blur on scroll.

Smooth transitions.

Logo animation.

Elegant mobile menu.

Hover underline animations.

CTA button.

Sticky navigation.

Buttons

Beautiful hover.

Magnetic effect.

Soft glow.

Ripple.

Tiny scaling.

Premium easing curves.

Cards

Rounded.

Glass.

Layered.

Animated border.

Subtle lighting.

3D hover.

Depth.

Never flat.

Icons

Use Lucide icons.

Minimal.

Consistent.

Premium sizing.

Perfect spacing.

Images

Never use generic stock photos.

Instead use

3D illustrations

Abstract renders

AI generated visuals

Wireframes

Blueprint illustrations

Engineering diagrams

Glass UI

Product mockups

Animations

Use

Framer Motion

GSAP only if necessary

Intersection Observer

Motion One

Lenis smooth scrolling

Animations should be GPU accelerated.

Avoid lag.

Scroll Experience

The scroll itself should feel luxurious.

Sections appear naturally.

Depth changes.

Images move.

Background subtly changes.

Sticky storytelling.

Soft transitions.

Forms

Forms should feel delightful.

Animated inputs.

Floating labels.

Real-time validation.

Success animations.

Loading states.

Error states.

Accessibility.

Keyboard support.

Mobile Experience

Mobile is NOT a simplified desktop.

Design mobile independently.

Thumb-friendly.

Responsive animations.

No overflow.

Fast loading.

Perfect spacing.

Performance

Target Lighthouse

95+

Lazy loading.

Image optimization.

Code splitting.

Minimal bundle size.

No layout shifts.

Excellent Core Web Vitals.

Accessibility

WCAG AA

Keyboard navigation

Screen reader friendly

Semantic HTML

Proper contrast

Reduced motion support

Focus states

SEO

Every page should have

Metadata

Open Graph

Twitter cards

Structured data

Canonical URLs

Sitemap

Robots

Architecture

Use

Next.js App Router

TypeScript

Tailwind CSS

Framer Motion

Lucide

Shadcn UI

React Hook Form

Zod

Class Variance Authority

Proper folder structure.

Reusable components.

Clean architecture.

No duplicated code.

Code Quality

Senior engineer quality.

Readable.

Scalable.

Maintainable.

Strong typing.

Reusable hooks.

Reusable animations.

Reusable UI primitives.

No hacks.

UI Philosophy

Do not create pages.

Create experiences.

Every page should have

identity

emotion

purpose

flow

momentum

surprise

confidence

Final Goal

When someone lands on ORYVA-AI they should think

"This company builds products at a world-class level."

Not because the copy says it.

Because the website proves it.

Use the attached ORYVA-AI documentation as the single source of truth for all pages, navigation, content hierarchy, page goals, forms, CTAs, and technical requirements. Do not invent new pages or remove existing functionality unless explicitly instructed. Respect the specification while elevating the visual design, UX, interaction design, motion system, accessibility, responsiveness, and overall product quality.

897faf52-4569-4190-9bae-0cf973b...

This should be your **master prompt**. The next prompts can be much more focused, such as:

1. Design the perfect hero section.
2. Build a world-class navigation system.
3. Create premium scroll animations.
4. Design the ORYVA FORGE page.
5. Build the Products page experience.
6. Create an advanced design system with reusable components.
7. Polish the website until it feels production-ready.
